

Sand Cleaning Solutions

Pinguino – for 4WD tractors (25-35Hp) equipped with lifter and Hydraulic joints

The Pinguino is a tractor towed beach cleaning machine perfect for cleaning medium size sand areas.

The Pinguino used a force fed system where a front blade is lowered into the sand by the operator within the tractor using the hydraulic lifter. The sand is forced onto a high frequency vibrating screen, which is then sifted to separate the waste materials from the sand. The sand falls through the mesh while the waste is forced up the screen into a practical steel the waste basket which can be emptied hydraulically.

Capable of cleaning both wet and dry sand, the depth of clean can be adjusted easily by the operator

Technical Specifications:

- **Completely hot dipped galvanized**
- **3 point linkage** suitable for 4WD Tractors (25-35Hp) with Hydraulic lifter
- **Waste box:** 125Ltr, Hydraulic device discharge on the ground
- **Cleaning Depth:** 0–12cm by tractors lifter
- **Cleaning width:** 115cm
- **2 easy interchangeable screens** with different mesh sizes (8mm, 12mm) and 1 propeller shaft
- **Dimensions:** : 125x116x82cm (H) **Weight:** 140kg
- **Cleaning capacity:** 3000 – 6500m² per hour depending on the tractors speed, which can be set by the operator according to the sand conditions, depth of clean required and quality of finish required.
